

# Executive Diagnosis Fact Sheet

A focused diagnostic product family for leaders who need one senior read before a larger assessment, political workshop, or expensive advisory route.

Format	Duration	Use when	Output	Investment
Signal Scan	30 minutes	One concrete blocker needs fast triage.	Sharpened problem statement, top 3 system signals, first root-cause hypothesis, immediate next move.	EUR 900
Executive Diagnosis	60 minutes	A leadership issue needs a senior diagnosis before the expensive route.	Likely root causes, priority action, stop/start/clarify recommendation, concise executive summary.	EUR 1,700
System Review	90 minutes	The issue spans ownership, handoffs, governance, technology, and value.	High-level system review, gap map, future-state direction, design principles, practical roadmap.	EUR 2,500

## How the taxonomy works

**Open Advisory Hours(TM)** is the product family. **Signal Scan**, **Executive Diagnosis**, and **System Review** are the three diagnostic formats. Executive Diagnosis is the recommended first move when the issue is important enough to require senior judgment, but not yet clear enough for a large mandate.

1	Request your slot	Choose Signal Scan, Executive Diagnosis, or System Review.
2	Share the issue	Send symptoms, context, and what already failed.
3	Live diagnosis	Map ownership, decision paths, handoffs, and the blocker behind the blocker.
4	Leave with a move	Receive a usable next step, not a generic slide deck.
